## RENEWABLE ENERGY PROJECT

EnvIM students, in the frame of the « Renewable Energy Project » are dealing with project management for renewable resources to produce energy.

Based on real conceptual projects, pre feasibility studies or proposals, each project aims the implementation of renewable energy resources like wood, biomass, sun or wind, for energy production in France or foreign countries.

Each student's team will analyze case studies through a comprehensive approach, including technical, environmental, financial, economy and social aspects. Each project has been supervised by experts of the fields.

### **Projects defense program:**

**9.30 AM – 10.15 AM:**

**Reforestation for biomass and timber production in Ivory Coast  
supervised by Clement Chenost, ONF international**

**10.30 – 11.15 AM:**

**Collective project : methanisation of bio waste plant in Vendée, France  
supervised by Guillaume Accarion, AKAJOULE**

**11.30 AM – 12.15 AM:**

**Heat network from biomass and biogas in Vendée, France  
supervised by Guillaume Accarion, AKAJOULE**

**14.30 PM – 15.15 PM:**

**Response to a call for tender, Photovoltaic in France  
supervised by Sebastien Prioux, UPSOLAR**

**15.30 PM – 16.15 PM:**

**Response to a call for tender Wind energy - off shore France, supervised  
by Guillaume Thome, Ernst et Young**
